MEDICITY CONNECT

THE CORNERSTONE OF CARE
COLLABORATION AND COORDINATION

In the past, communication between care settings relied on outdated tools such as illegible faxes, paper trails and phone tag. The administrative tasks surrounding communication and management of a patient's care were laborious and time-intensive.

Those days are over, as modern day solutions to facilitate electronic collaboration are available via Medicity® Connect™. Medicity Connect allows providers at different care settings to securely message with one another and/or manage the referral process.

CLOSE THE LOOP ON REFERRALS

With Medicity Connect, the referral process becomes easy to manage. Providers and their staff can customize a referrals request questionnaire to ensure all pertinent information accompanies the referral. They can also associate themselves with an organization or network affiliation to ensure preference of selection.

Once referrals are placed, they can be managed by the sending and receiving care setting in a configurable worklist. Providers can quickly gain access to pertinent clinical information via this worklist and, furthermore, message one another in real-time for further details.

> Medicity Connect allows providers at different care settings to securely message with one another and/or manage the referral process.

Medicity®

SECURE DIRECT MESSAGING (USING DIRECT PROTOCOL)

Secure Messaging enables providers to send and receive secure messages and associated patient health information in a Meaningful Use Stage 2 Transitions of Care compliant manner. The solution supports all three Direct protocols for message transmission — S/MIME, SMTP and XD*.
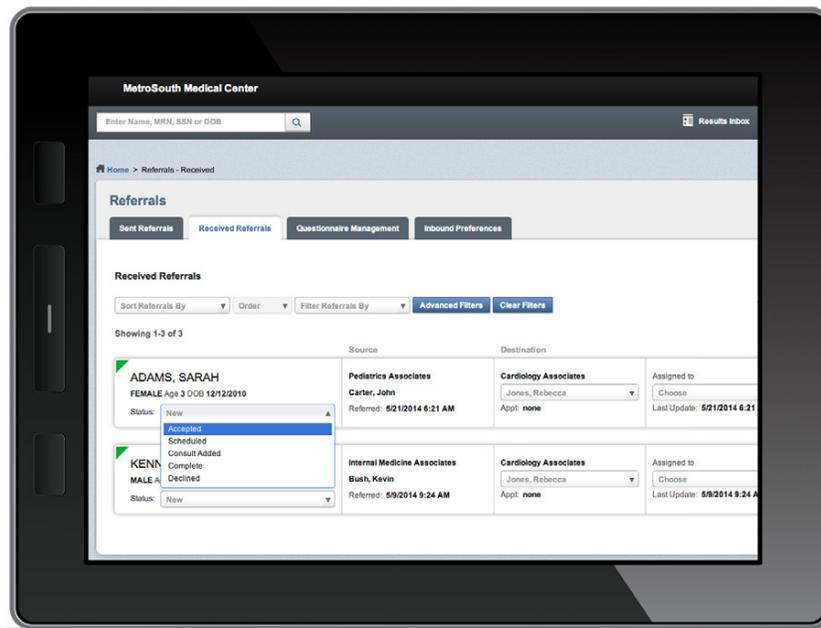

Each user is provisioned with a secure Direct-compliant email address and has the ability to search a directory of providers in the network. Users have the ability to send and receive messages and view attachments such as clinical summaries.

The solution can also be configured so that providers can send and receive secure messages directly in their Electronic Health Record (EHR).

MEDICITY CONNECT ENABLES:

- Communication and collaboration between care settings

- Improvements in managing care transitions in a MU 2-compliant manner

- Improvements in keeping referrals in-network and monitoring for follow-up and retention

- The creation of transitions of care networks

If you're ready to improve communication between care settings, let Medicity Connect get you there. Contact a Medicity representative today at info@medicity.com.
