

HEALTH CATALYST INTEROPERABILITY ORGANIZE

CLOSE INFORMATION GAPS AND EXPERIENCE COMPLETENESS OF DATA FOR YOUR PATIENT

Providing patients with the right care at the right time is a goal for all health care organizations. To meet that goal, clinical staff need a comprehensive view of a patient's clinical history at their fingertips. With Health Catalyst Interoperability Organize, health care professionals can easily and securely access their patients' clinical history — including lab results, reports, medication histories and clinical summaries — via HCI Organize's Community Health Record, or directly from their EHR.

Comprehensive view
of patients' health
information

With HCI Organize, clinicians have instant access to all previous encounters, which allows them see patient data based on episodes of care. Providers can also search for patient histories related to a specific problem or condition.

AVOID DUPLICATE TESTING AND IMPROVE QUALITY OF CARE

HCI Organize gives clinicians access to diagnostic test and lab results — they can filter the data by date range or status, or simply use a search function to find what they want quickly. With a rich view into this data, clinicians can identify what has been completed in order to avoid duplicate testing. They also can define a more targeted work-up based on the most recent test results and current diagnoses. Clinicians will spend less time tracking down patient records and more time focused on delivering better care to patients.

PROVIDE VITAL CLINICAL INFORMATION ACROSS THE ENTIRE CONTINUUM OF CARE

HCI Organize helps with medication reconciliation by offering insight into which prescriptions patients have filled on an outpatient basis, alerting the clinician to possible medication non-adherence. HCI Organize also allows clinicians to review inpatient orders and drug therapies, and generates alerts to help flag potential drug interactions or compliance issues.

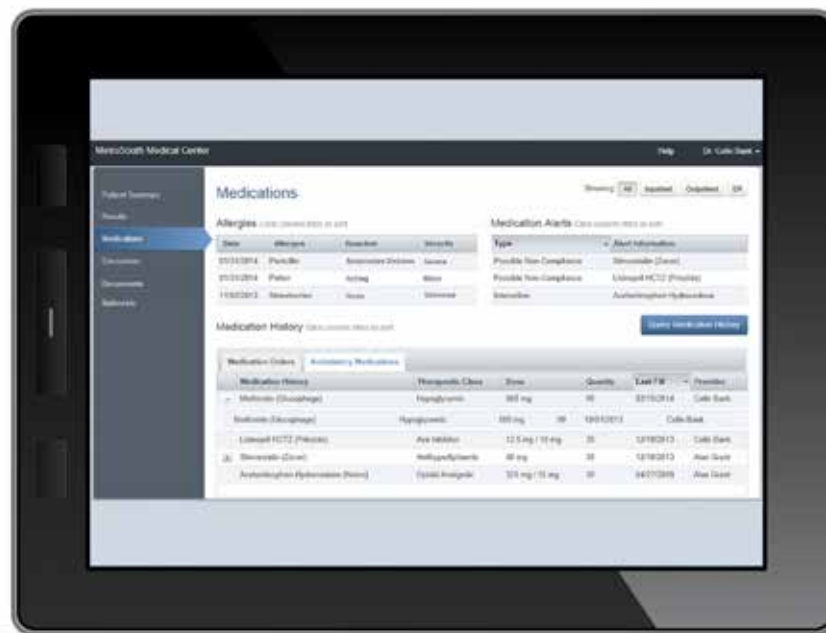

SUPPORT EFFECTIVE TRANSITIONS OF CARE

HCI Organize supports transitions of care by allowing clinicians to access clinical summaries, or Continuity of Care Documents (CCDs), generated at each encounter. Furthermore, those CCDs can be accessed and securely exchanged in support of care coordination activities while meeting Meaningful Use objectives.

HCI ORGANIZE ENABLES:

- Improved quality of care with a 360-degree view of a patient's health history
- Closing the data gap to improve clinical decision making
- Reducing costs associated with duplicative testing
- Seamless transitions of care

If you're ready for a comprehensive, 360-degree view of your patients, let HCI Organize get you there. Contact a Health Catalyst Interoperability representative today at info@medicity.com.
